Dolan McEniry Core Plus

INDEX: BLOOMBERG US GOVT/CREDIT 1-3 YR TR USD
Third Quarter 2026

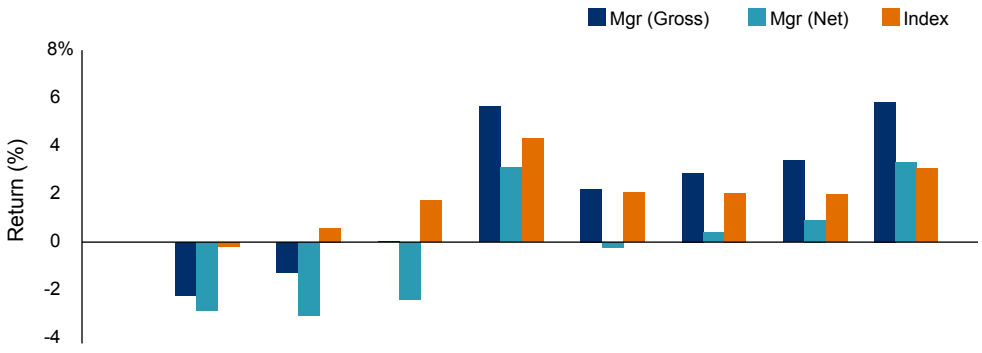

INVESTMENT STRATEGY

Dolan McEniry Core Plus is a fixed income investment product benchmarked against the Bloomberg U.S. Aggregate Index or the Bloomberg U.S. Intermediate Credit Index. In this strategy, the firm utilizes U.S. corporate investment grade, high yield and U.S. Treasury securities. Dolan McEniry Core Plus is approximately 75% investment grade corporate bonds and 25% high yield corporate bonds. The Dolan McEniry Core Plus Composite was established and created on September 30, 1997. Credit analysis is the firm's core competence and 100% of it is done in-house. Dolan McEniry is a bottom-up, free cash flow oriented, and fundamentals driven value investor.

Important Information

J.P. Morgan is committed to making our products and services accessible to meet the financial services needs of all our clients. Please direct any accessibility issues to your J.P. Morgan Financial Advisor. Please be advised that the fund or manager style herein may be presented with an index or benchmark that is different from the indexes or benchmark(s) presented in other materials and performance reports that are provided to you, or that are used by JPMS in its review and assessment of the performance of the investment manager or its investment strategy. The information and data presented herein is in conjunction with the J.P. Morgan Securities fee-based investment advisory programs, through which clients may seek investment advisory services, including assistance in selecting investment managers to manage their program assets on discretion. Clients may also access mutual funds and exchanged-traded funds ("ETFs") in certain advisory accounts.

JPMS or its affiliates may hold positions in or seek to perform investment banking services for the companies listed herein. The Strategy is offered through separately managed wrap fee account programs, sponsored by JPMS for investment advisory clients. JPMS is a broker-dealer and investment advisor registered with the Securities and Exchange Commission ("SEC"), and is a member of the Financial Industry Regulatory Authority ("FINRA") and Securities Investor Protection Corporation ("SIPC"). For specific information contact your JPMS Financial Advisor.

Past performance does not guarantee future results. The securities identified in this Profile, if any, do not represent all of the securities purchased, sold or recommended for advisory clients. Securities shown should not be considered recommendations or solicitations and may not have been, or in the future profitable. All data is subject to change without notice. Please ask your financial advisor for more information.

Comparable indices: The index data represents an unmanaged portfolio of securities. Investors cannot invest directly in an index.

Composite Performance:
Actual composite performance data is typically represented and is provided by the investment manager; however, please be advised that certain managers provide performance represented by a model portfolio, which is an account representing the manager's ideal unconstrained portfolio. The composite results shown are affected by the methodology used to select accounts and the size and number of accounts in the composite, which can vary among managers and may include separately managed accounts, institutional accounts and/or mutual funds. No guarantees can be made that the composite performance is a statistically accurate representation of performance of any specific account. Individual clients may also stipulate certain guidelines regarding management of their accounts, and, therefore, volatility and performance may vary from the composite returns. The performance data included herein was derived by geometrically linking quarterly returns provided by each manager. Returns are gross of fees, denominated in U.S. dollars, and include reinvestment of dividends, interest and other earnings. Trailing period performance returns greater than one year are annualized. JPMorgan Securities does not verify composite information and is relying on the managers for the accuracy of the information.

Gross/Net Performance:
Net Fee Performance (without Overlay Fee)
Performance results, if any, are shown "Gross", before the deduction of Program Fees, and "Net", after deduction of Program Fees. Net performance results reflect a deduction of 2.25%. This consists of two components: the maximum JPMS Fee Rate of 2.00% and the Individual Manager Fee Rate of 0.25%. The Individual Manager Fees may differ from manager to manager and may change their fee from time to time. If you select this manager for your account, check the Individual Manager Fees specified in the written client agreement, in case these have changed since you received this profile. The actual JPMS Fee Rate applicable to your account may vary.

Dispersion statistics present the rate of return for the highest and lowest performing account within the composite as well as a median value. Morningstar surveys this data from the manager on an annual basis. Dispersion statistics are not available for composites with less than five accounts.

Dispersion Statistics as of 2024
Highest Return in Composite: 5.58%
Median Return in Composite: 4.56%
Lowest Return in Composite: 3.76%

Information Regarding Advisory Services:
For more information on advisory program and manager fees, please review the applicable ADV Disclosure Brochure, which is available upon request to your Financial Advisor or at www.adviserinfo.sec.gov. Please see the Glossary of Terms for more information regarding indexes, asset class descriptions and certain terminology.

Quality ratings, such as "AAA", refer to portfolio securities and not to the strategy itself. Securities rated below BBB are considered more speculative and are subject to greater risks than higher rated bonds. Portfolio composition may change at any time.

Valuations:
Assets in a portfolio may be valued using internal pricing models or an external pricing service. Different models or services could give different valuations. Values might not represent the actual terms at which a transaction products) in certain portfolios could occur. Values used in calculating returns in this report may differ from those in other documents, such as statements and performance reports, because of, e.g., updated pricing, late posted trades and income accruals. The types of assets held in a portfolio depend, in part, on the Strategy in which the portfolio is invested. The value of assets held pursuant to certain strategies could reflect a price estimate on a day different from the performance calculation date, e.g., in the case of over-the counter securities that are not traded every day and illiquid funds. For example, current values for any private investments, real estate and hedge funds are typically the latest values we have received from the underlying fund, which in many cases will be as of a date before the performance calculation date. As such investments are generally illiquid, these values are estimates, determined less frequently than values for many other types of securities, and typically based on the fund's or its manager's methodology, as stated in the investment's operative documents. When applicable, once we receive the actual prices for hedge funds for a particular period, we retroactively update those hedge fund prices and hence the composite performance results.

The Top Holdings table displays the largest holdings in a representative separate account from the composite as a percentage of the total value of the account's holdings. The list is current as of the date indicated and does not indicate that any particular account, other than the representative account, ever held any security listed or will hold any security listed at any subsequent point. Top Holdings are for informational purposes only and should not be deemed to be a recommendation to purchase or sell the securities mentioned. Individual client portfolios may differ based upon, among other things, variations in security purchase price and date and individual client restrictions. The securities listed may not represent any account's entire portfolio as of the date indicated or as of any other date and may represent in aggregate only a small percentage of an account's holdings. It should not be assumed that

any security listed was, or will prove to be, profitable.

Investment returns and other data were provided to JPMS by sources considered reliable by JPMS, but have not been independently verified by and are not guaranteed or warranted by JPMS as to accuracy or completeness. Please see the Glossary of Terms for more information regarding indexes, asset class descriptions and certain terminology. JP Morgan Chase & Co., its affiliates, and employees do not provide tax, legal or accounting advice. This material has been prepared for informational purposes only, and is not intended to provide, and should not be relied on for tax, legal and accounting advice. You should consult your own tax, legal and accounting advisors before engaging in any financial transaction.

Please be advised that the fund or manager style herein may be presented with an index or benchmark that is different from the indexes or benchmark(s) presented in other materials and performance reports that are provided to you, or that are used by JPMS in its review and assessment of the performance of the investment manager or its investment strategy.

GLOSSARY OF TERMS

Alpha: Measures return that is not considered attributable to general market movements. It is used to evaluate what portion of a portfolio's performance can be attributed specifically to the manager.

Annualized Performance: This is used to show performance for periods of greater than one year and is also called compound rate of return. Annualized return measures an investment's increase in value each year, including capital appreciation and reinvested income.

Average Effective Maturity: Average effective maturity is a weighted average of all the maturities of the bonds in a portfolio, computed by weighting each bond's effective maturity by the market value of the security. Average effective maturity takes into consideration all mortgage prepayments, puts, and adjustable coupons. Longer-maturity funds are generally considered more interest-rate sensitive than their shorter counterparts. We list Average Effective Maturity for Taxable Fixed-Income and Hybrid funds and Average Nominal Maturity for Municipal Bond Funds. Since this is collected by survey, it is important to bear in mind that different fund companies may use different interest-rate assumptions in determining call likelihood and timing. Generally speaking, the longer the maturity, the greater the interest rate risk. When duration is unavailable, this is used in the calculation of the fixed-income style box.

Beta: Beta measures risk from market moves. If a portfolio's beta is 1, the market's expected risk level and the portfolio's expected risk level are considered the same. A portfolio with a beta greater than 1 is thought to be riskier than the market; a portfolio with a beta less than 1 is thought to be less risky than the market.

Coupon Percentage: Coupon Percent is the periodic interest payment on a fixed-income security, expressed as a percentage of par value, made to the bondholders during the life of the bond. The Average Coupon Percent of a portfolio is the weighted average of all the coupon percents of the bonds in the portfolio.

Credit Quality: A debt issuer's credit quality refers to the ability of the issuer to repay the debt, as perceived by the market and expressed in terms of credit ratings assigned. Average credit quality for bond portfolios reflects average quality of constituent bonds.

Credit Quality Chart: This graph, shown with Fixed Income portfolios, displays the percentage of aggregate portfolio assets invested among the various credit rating categories that has been provided by the investment manager. JPMorgan Securities cannot guarantee that these credit rating categories are consistent with those assigned by one of the Nationally Recognized Statistical Rating Organizations, and relies on the investment managers for the accuracy and consistency of this information. The credit quality of the issuer typically reflects its financial ability to fulfill payment.

Down (Up) Market Capture Ratio: The down (up) market capture ratio looks at performance of a portfolio versus that of the market (i.e., the appropriate index) in down (up) markets. The better the capital protection given by the portfolio in down markets, the lower the down market capture ratio. The better the performance in comparison with the market, the higher the up market capture ratio.

Duration: Duration is a measure of the sensitivity of bond prices to changes in yield. Average duration refers to the weighted average of time periods over which a bondholder receives cash flow from the bond, including payoff at maturity.

Fixed Income Sectors Chart: This graph, shown with Fixed Income portfolios, displays the percentage of holdings allocated among taxable and non-taxable fixed income sectors.

Information Ratio: A ratio of the excess returns of a portfolio above the returns of a benchmark to the volatility of excess returns. The information ratio measures a portfolio manager's ability to consistently generate excess returns relative to a benchmark.

Market Capitalization: Market cap breakdown is applicable for equity funds. It gives information about the market capitalization range of the shares the fund is investing in. In general large cap companies' shares are considered to be less risky compared to medium and small cap companies. So this breakdown information is also a decisive factor while choosing a scheme. Market capitalization, applicable to equity and balanced strategies, classifies a stock as giant, large, mid, small, and micro based on its position in the cumulative capitalization of its style zone. Giant-cap stocks are those that together account for the top 40% of the capitalization of each style zone; large-cap stocks represent the next 30%; mid-cap stocks represent the next 20%; small-cap stocks represent the next 7%; and micro-cap stocks represent the remaining 3% balance. The market cap breakdown allows investors to see the whole range of companies held by the fund.

Maturity: Can refer to either the time remaining or the date on which a bond comes due; average maturity refers to the average of the time to maturity of all bonds in a portfolio.

R-Squared: R-Squared is a statistical measure of the degree to which a change in an investment is attributable to a change in its benchmark. An R-Squared of 1.00 would indicate that the two move in tandem, or are perfectly correlated.

Sharpe Ratio: Measures the amount of return earned, above the risk-free rate of return, for each unit of risk taken. It is calculated by dividing the portfolio's average rate of return less the risk-free rate of

return by the standard deviation of the portfolio. Typically, the higher the Sharpe ratio, the better the investment's performance relative to its risk.

Standard Deviation: Standard deviation measures historical variability of returns from the mean. A higher standard deviation means greater variability, which often implies uncertainty of returns, and therefore more risk. See also volatility, risk.

Tracking Error: The standard deviation of excess returns above the returns of a benchmark. Tracking error measures the divergence between the return patterns of a portfolio and the return patterns of a benchmark.

Turnover: The lesser of purchases or sales of non-cash securities divided by total net assets. Average turnover is generally calculated for a 1-year period. This information is provided by the management firm or a reliable data source.

Yield To Maturity: The weighted average percentage rate of return paid on a bond, note, or other fixed income security if the investor buys and holds it to its maturity date.

Yield To Worst: The weighted average of the lowest potential yield that can be received on the bond in the portfolio without the issuers actually defaulting.

INDICES/BENCHMARKS: Indices are baskets of securities (hypothetical and unmanaged). They can be used as benchmarks against which the performance of an individual investment or portfolio can be measured. The indices listed in this section may be used as primary/secondary benchmarks for the various investment strategies offered through the Advisory Services programs as well as proxies for various market segments within a Returns Based Style Analysis. Benchmarks represent an index or blend of indices provided for information purposes. The composite performance of the model shown is compared to a blended benchmark. Where a blended benchmark is comprised of historical returns from several indices used, it is the current blended benchmark weightings to these indices are stated above and have been applied across all time periods indicated, even though the historical weightings to these indices may have changed over time. These indices are unmanaged and intended only to provide a hypothetical representation for use as a benchmark for the portfolio allocation. They were chosen for their general relevance to the asset classes represented and are provided for informational purposes only. There may be material differences between the historical returns of an index versus those in the actual asset class or classes it represents, based upon the makeup of the actual investment portfolio of the mutual funds or ETFs it represents. This is especially true in historical simulations, when the selected index represents several different asset classes. Indices have not been adjusted to reflect the deduction of any fees or expenses, and assume reinvestment of dividends and interest. Therefore, indices may not be a meaningful comparison. Client accounts may hold far fewer securities, which could represent a greater level of volatility and risk than an index. **Past performance of any index does not guarantee future results.**

Index Definition

Bloomberg US Govt/Credit 1-3 Yr TR USD: The index measures the performance of non-securitized component of the U.S. Aggregate Index with maturities of 1-3 years,including Treasuries, government-related issues and corporates. It is a subset of the U.S. Aggregate Index.

Morningstar Category

Corporate Bond: Corporate bond portfolios concentrate on investment-grade bonds issued by corporations in U.S. dollars, which tend to have more credit risk than government or agency-backed bonds. These portfolios hold more than 65% of their assets in corporate debt, less than 40% of their assets in non-U.S. debt, less than 35% in below-investment-grade debt, and durations that typically range between 75% and 150% of the three-year average of the effective duration of the Morningstar Core Bond Index. Portfolios are placed in a given category based on their average holdings statistics over the past three years. Morningstar's editorial team also reviews and approves all category assignments. If the portfolio is new and has no history, Morningstar estimates where it will fall before giving it a more permanent category assignment. When necessary, Morningstar may change a category assignment based on recent changes to the portfolio.

Definitions

Benchmarks represent an index or blend of indices and are provided for informational purposes. A composite is an aggregation of a number of client portfolios that follow the same investment strategy and meet certain criteria. The composite returns do not represent the return of any actual individual portfolio. The composite itself is not a financial product and, accordingly, you cannot directly invest in the composite.

Composite Gross returns reflect fees paid by any funds in which the portfolios invest (i.e., fees embedded in the valuation of underlying funds) and certain transaction fees.

Composite Net returns reflect those fund fees and also the maximum client fee paid to J.P. Morgan for the portfolios.

Internal dispersion measures the spread of annual returns individual portfolios within a composite. It is calculated using the equal-weighted standard deviation of the gross returns of portfolios that were included in the composite for the full year. Internal dispersion is not shown for calendar years for which data is not available to calculate a statistically meaningful internal dispersion number, including calendars years with five or fewer portfolios in the composite for the full year. Volatility measures the extent to which returns vary over time.

Volatility is calculated using the standard deviation of returns and shown since inception as annualized standard deviation.

INVESTMENT RISKS

Sector Strategies: Portfolios that invest exclusively in one sector or industry involve additional risks. The lack of industry diversification subjects the investor to increased industry-specific risks.

Non-Diversified Strategies: Portfolios that invest a significant percentage of assets in a single issuer involve additional risks, including share price fluctuations, because of the increased concentration of investments.

High-Yield Bonds: Portfolios that invest in lower-rated debt securities (commonly referred to as junk bonds) involve additional risks because of the lower credit quality of the securities in the portfolio. The investor should be aware of the possible higher level of volatility, and increased risk of default.

Tax-Free Municipal Bonds: The investor should note that the income from tax- free municipal bond funds may be subject to state and local taxation and the Alternative Minimum Tax.

Bonds: Bonds are subject to interest rate risk. As the prevailing level of bond interest rates rise, the value of bonds already held in a portfolio declines.
Portfolios that hold bonds are subject to declines and increases in value due to general changes in interest rates.

Bank Loan/Senior Debt: Bank loans and senior loans are impacted by the risks associated with fixed income in general, including interest rate risk and default risk. They are often non-investment grade; therefore, the risk of default is high. These securities are also relatively illiquid. Managed products that invest in bank loans/senior debt are often highly leveraged, producing a high risk of return volatility.

Short Positions: When a short position moves in an unfavorable way, the losses are theoretically unlimited. The broker may demand more collateral and a manager might have to close out a short position at an inopportune time to limit further losses.

Long-Short: Due to the strategies used by long-short funds, which may include but are not limited to leverage, short selling, short-term trading, and investing in derivatives, these funds may have greater risk, volatility, and expenses than those focusing on traditional investment strategies.

General Risks & Considerations:

Any views, strategies or products discussed in this material may not be appropriate for all individuals and are subject to risks. Investors may get back less than they invested, and past performance is not a reliable indicator of future results. Asset allocation/diversification does not guarantee a profit or protect against loss. Nothing in this material should be relied upon in isolation for the purpose of making an investment decision. You are urged to consider carefully whether the services, products, asset classes (e.g. equities, fixed income, alternative investments, commodities, etc.) or strategies discussed are suitable to your needs. You must also consider the objectives, risks, charges, and expenses associated with an investment service, product or strategy prior to making an investment decision. For this and more complete information, including discussion of your goals/situation, contact your J.P. Morgan representative.

Non-Reliance:

Certain information contained in this material is believed to be reliable; however, JPM does not represent or warrant its accuracy, reliability or completeness, or accept any liability for any loss or damage (whether direct or indirect) arising out of the use of all or any part of this material. No representation or warranty should be made with regard to any computations, graphs, tables, diagrams or commentary in this material, which are provided for illustration/reference purposes only. JPM assumes no duty to update any information in this material in the event that such information changes. Views, opinions, estimates and strategies expressed herein may differ from those expressed by other areas of JPM, views expressed for other purposes or in other contexts, and this material should not be regarded as a research report. Any projected results and risks are based solely on hypothetical examples cited, and actual results and risks will vary depending on specific circumstances. Forward-looking statements should not be considered as guarantees or predictions of future events.

Nothing in this document shall be construed as giving rise to any duty of care owed to, or advisory relationship with, you or any third party. Nothing in this document shall be regarded as an offer, solicitation, recommendation or advice (whether financial, accounting, legal, tax or other) given by J.P. Morgan and/or its officers or employees, irrespective of whether or not such communication was given at your request. J.P. Morgan and its affiliates and employees do not provide tax, legal or accounting advice. You should consult your own tax, legal and accounting advisors before engaging in any financial transactions.

Important Information About Your Investments And Potential Conflicts Of Interest
Conflicts of interest will arise whenever JPMorgan Chase Bank, N.A. or any of its affiliates (together, "J.P. Morgan") have an actual or perceived economic or other incentive in its management of our clients' portfolios to act in a way that benefits J.P. Morgan. Conflicts will result, for example (to the extent the following activities are permitted in your account): (1) when J.P. Morgan invests in an investment product, such as a mutual fund, structured product, separately managed account or hedge fund issued or managed by JPMorgan Chase Bank, N.A. or an affiliate, such as J.P. Morgan Investment Management Inc.; (2) when a J.P. Morgan entity obtains services, including trade execution and trade clearing, from an affiliate; (3) when J.P. Morgan receives payment as a result of purchasing an investment product for a client's account; or (4) when J.P. Morgan receives payment for providing services (including shareholder servicing, recordkeeping or custody) with respect to investment products purchased for a client's portfolio. Other conflicts will result because of relationships that J.P. Morgan has with other clients or when J.P. Morgan acts for its own account. Investment strategies are selected from both J.P. Morgan and third party asset managers and are subject to a review process by our manager research teams. From this pool of strategies, our portfolio construction teams select those strategies we believe fit our asset allocation goals and forward looking views in order to meet the portfolio's investment objective. As a general matter, we prefer J.P. Morgan managed strategies. We expect the proportion of J.P. Morgan managed strategies will be high (in fact, up to 100 percent) in strategies such as, for example, cash and high-quality fixed income, subject to applicable law and any account-specific considerations. While our internally managed strategies generally align well with our forward looking views, and we are familiar with the investment processes as well as the risk and compliance philosophy of the firm, it is important to note that J.P. Morgan receives more overall fees when internally managed strategies are included. We offer the option of choosing to exclude J.P. Morgan managed strategies (other than cash and liquidity products) in certain portfolios.

Legal Entity and Regulatory Information
J.P. Morgan Wealth Management is a business of JPMorgan Chase & Co., which offers investment products and services through **J.P. Morgan Securities LLC** (JPMS), a registered broker-dealer and investment adviser, member FINRA and SIPC. Insurance products are made available through Chase Insurance Agency, Inc. (CIA), a licensed insurance agency, doing business as Chase Insurance Agency Services, Inc. in Florida. Certain custody and other services are provided by JPMorgan Chase Bank, N.A. (JPMCB). JPMS, CIA and JPMCB are affiliated companies under the common control of JPMorgan Chase & Co. Products not available in all states.
